

Rain Bird Xfcv Dripline w/HD Check Valve - 0.9gpm 12" Spacing 100' Coil

RGX47030

Details

Rain Bird's patent-pending 3.5 psi check valve technology keeps the dripline charged with water at all times, increasing uniformity of watering, and conserves water by eliminating the need to recharge the line at the beginning of each watering cycle. Through the use of a proprietary tubing material, the XFCV Dripline with heavy-duty check valve is the most flexible dripline tubing in the industry, making it the easiest dripline to design with and install. Rain Bird's low-profile emitter design reduces in-line pressure loss, allowing longer lateral runs, simplifying design and reducing installation time. Variety of emitter flow rates, emitter spacing and coil lengths provide design flexibility for on-surface areas with or without elevation changes.

Specifications

Manufacturer	Rain Bird
Manufacturer's Model No	XFCV0912100

Baber Turf Equipment Co.

Unit 6 / 10 Firth Street Auckland, 2113
